Doosan Infracore America Lift Truck dealers successfully operate in over 220 service and sales places all through Canada and the U.S. The lift truck product line remarkably comprises of 63 distinctive models consisting of 82 various battery and engine configurations of Electric-powered and Internal Combustion forklifts. Capacities of these numerous truck designs range from 3,000 to 33,000 lbs. All vehicles are built in an ISO 9001 certified facility.

Doosan Infracore America is the fastest expanding forklift business in the North American marketplace, due to their consistency in retaining a high level of client service quality and optimum product performance to all Doosan Infracore Lift Truck users. The U.S. forklift division based in Cleveland has a expert team knowledgeable in Sales, Purchasing, Advertising, Logistical and Technical Support.

Originally the home-based forklift marketplace in Korea was an open import enterprise. Korea Machinery Co. Ltd. begun in 1960, to import fully assembled lift trucks as part of a domestic equipment expansion project. Sales of these goods were originally targeted to state-run companies, large scale businesses, and the armed forces. This eventually led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced trade operations throughout Korea to service and sell this heavy equipment. By 1978, a forklift production plant was successfully completed. Continuous technical training became the new focus for improving quality and product development.

Daewoo began the first domestic lift truck business in 1967, and quickly acquired a massive 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's progressive technological improvements combined with sales success placed them in a situation of considerable expansion of their lift truck business.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a cooperative venture project to assist them in the highly competitive North American materials handling market. This joint-venture proved highly lucrative for Daewoo and their forklift sales expanded greatly. In 1984, the company completed development of a new facility to help in manufacturing high end value-added products for export. In 1993, the company had a global sales network and started exporting designs they had established through in-house technology, as an sovereign product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion opportunities into overseas marketplaces.
